

Manhaj Teacher — Phase 1 Workflow Handover

Phase: Phase 1 (build now). Companion to docs/admin_v1_build_handover.md (architecture, auth, the staff_absences approval queue that triggers §4 below) and governed by docs/handover-assets/_SHARED_SPEC.md . **Who it's for:** anyone picking up the teacher build — the engineer wiring it, the hybrid CTO sizing the AI cost, or the (non-technical) sales lead validating the workflow with the school.

How to read this: §0 is the orientation (who the teacher is, the screen-at-a-glance table, what's deferred and why). §1–§4 are one section per Phase-1 screen, each with a plain-English description, the embedded screenshot, a Mermaid workflow, the backend/data linkage, and mock data tables. §5 is the student-goals input note (cross-links to the Student doc). §Z is the build & data handover.

Diagrams are **Mermaid** — they render as pictures on GitHub and in our PDF build. Teachers work on the **web app** in Phase 1 (a phone-friendly web app, opened in the browser). A native mobile app is a later phase.

0. Archetype summary

The Manhaj teacher is the person closest to the student data. Every school day they **take attendance** (every period), and across the month they **score the Manhaj rubric, keep a light class summary / lesson plan**, and — when a colleague is off sick — their already-entered data is what **auto-builds a substitute's handoff sheet**. Phase 1 deliberately keeps the teacher's typing to a minimum: the platform pre-fills everything it already knows (roster, timetable, curriculum split, this week's signals) and the teacher only adds the human judgement the system can't infer. Everything a teacher enters flows "up" — attendance into the parent digest and the admin retention dashboard, rubric scores into report cards (a Phase-2 artifact · Admin report_archive), class summaries into the parent weekly digest, lesson plans into the substitute sheet.

Phase-1 screens at a glance

Screen	Purpose	Key data it READS	Key data it WRITES	Links to
T1 · One-tap attendance	Per-period roll call + an end-of-day catch-up entry	roster (student_enrollments), timetable_slots , bell_periods , yesterday's marks	attendance_marks	Parent digest (P1), Admin A5 (Students/at-risk → risk_flags), Admin A8 (Reports/regulator), T6 substitute sheet
T2 · Rubric scoring	Monthly (maybe quarterly) Manhaj 6-axis score, AI-suggested	grades (assessment_results), attendance_marks , behaviour_notes , prior rubric_scores	rubric_scores , ai_usage_ledger	Report cards (Phase-2 · Admin report_archive), Parent digest, Student goals (§5)
T3 · Class summary / lesson plan	Weekly pre-lesson plan + optional post-lesson summary + follow-ups	timetable_slots , section_subjects (curriculum split), lessons	lessons (+NEW cols), NEW lesson_followups	T6 substitute sheet, Parent digest (P1, deferred draft)
T6 · Substitute handoff sheet	Auto-built day plan for a sub covering an absent teacher	staff_absences , timetable_slots , lessons , roster, attendance_marks , behaviour_notes / risk_flags	substitute-sheet artifact, ai_usage_ledger , audit_log	Admin A4 (Faculty/HR sick-leave queue)
§5 · Set student goal	Teacher-side surface to set a goal for a student in their sections	student_enrollments , teacher_section_subject	NEW student_goals	Student doc §S1 (students set their own goals)

Phasing snapshot

Item	Phase	Why (one line)
T1 One-tap attendance	Phase 1	Daily core; everything downstream depends on attendance existing.
T1 end-of-day entry (teacher or admin)	Phase 1	Same input path; lets the office backfill when a teacher couldn't mark in-period.
T2 Rubric scoring (AI-suggested)	Phase 1 (flagged)	Keep for now, but a candidate to push to Phase 2 pending the AI-cost finding (see §2).
T3 Weekly pre-lesson plan	Phase 1	One short entry per class per week; feeds the substitute sheet.
T3 Post-lesson summary	Phase 1	Optional, any-time; light.
T3 "Add follow-up" pop-up	Phase 1	Convenient capture; no parent preview; new lesson_followups table.
T6 Substitute handoff sheet	Phase 1	Derivable from data already entered; high founder value.
§5 Teacher sets student goal	Phase 1	Same shape as student-side §S1; teacher is just a different actor.
AI parent-summary draft (in T3)	Phase 2	Only needed ~monthly / on request, not per class — defer until cadence + cost are confirmed.
T4 Quick-quiz builder	Phase 2	Separate student-learning product, charged separately; demo shell only in P1.
T5 Parent-message drafts	Phase 3	Gmail-linked teacher↔parent messaging; open question on where the teacher replies (Gmail vs portal).

1. T1 — One-tap attendance

What it is. The most-used screen in the whole product. A teacher opens it for the class that is on *now* and marks every student present / absent / late / excused. The default flow is "everyone present, then change the few exceptions"; an AI nudge offers to apply exactly that. Absences and lates get a one-tap **reason chip** (Bus late, Medical, Family informed, Unknown, Other). There is also an **end-of-day catch-up entry**: the same screen, reachable for any earlier period, so a teacher who couldn't mark in-class — **or an administrator on the teacher's behalf** — can enter it later. The input process is identical either way; only `marked_by_teacher_id` (and the audit actor) differ.

Save attendance

[Visual summary](#) [Backend & data](#) [The notebook](#)

Open modeling full-screen **F**

[illegible]

What this screen is

Mobile-first roll-call screen optimised for marking attendance during class. Bulk default + tap-to-change exceptions, with AI-suggested patterns and reason chips for absences/slates.

180442-1715-90248

Every teacher, every period -- the most-used screen in the entire product.

WORKFLOW IT SUPPORTS

Replaces paper attendance books and slow desktop SIS forms. Sub-60-second completion target. Mobile-first because teachers use phones in class.

NEW FEATURES

- Class context card (period, room, student count)
- Live attendance stats (present / absent / late) updating as you tap
- All nudge: "You mark all present / there's exceptions – apply that"
- Bulk action bar (All present / Clear / From yesterday)
- Per student row: avatar, name, contextual signal ("also absent Mon & Tue")
- 3-button toggle (✓ Present / ✗ Absent / 0 Late) with colour-coded row title
- Reason chips for absenceDate (auto-suggested from context: "Bus is late today")
- Sticky save bar always in thumb reach

② - 84740000 00 0000

What it takes to build this for real

Data inputs, backend services, fit, role, and privacy considerations.

CONFLICT OF INTEREST STATEMENT

- Class roster for current period
- Yesterday's attendance pattern per student (for AI nudges)
- External signals (bus delays from transport integration → auto-suggest "Bus late")
- Per-student at-risk flag (so teacher sees "Chad also absent Mon & Tue" inline)
- Reason codes appropriate for the school's context

© 2004 The Authors
Journal compilation © 2004 Blackwell Publishing Ltd

- Attendance marks table (student, period, date, status, reason, teacher, marked_at)
- Optimistic UI with background sync (teacher doesn't wait)
- Reason chip rules engine (when bus is late, suggest 'bus late' for affected students)
- Daily attendance roll-up feeds parent *digged* [2], *classroom dashboard* [X3], *regulator hub* [X2]
- Conflict detection (same student marked in two classes simultaneously)

and the

Light pattern detection ("you usually do this"), contextual reason suggestions, at-risk flag surfacing — never auto-marks attendance.

management & education

Teacher sees only their assigned classes. Aggregate view are role-based

◎ 一、THESE WORDS

Live preview

Embedded below – or open full-screen, * to interact with it directly.

Who uses it & permissions. Every teacher, for their own assigned classes only (RLS scopes the roster to sections they teach). An **administrator** can open the same screen for any class to do end-of-day entry; the row records who actually marked it. Teachers never see another teacher's classes.

Workflow.

Backend & data linkage.

- The roster comes from `student_enrollments` for the section on the current `timetable_slots` row; the period/time block on the class-context card is the `bell_periods` row.
- Each student row maps to **one** `attendance_marks` row, keyed `unique (student_id, marked_on, bell_period_id)` — so re-saving an end-of-day correction is an **upsert**, not a duplicate. The 3-button toggle writes `status` (`present` / `absent` / `late` ; `excused` available via the menu). The reason chip writes the `reason` text column.
- `marked_by_teacher_id` is the signed-in teacher; in **end-of-day admin mode** the teacher field is set to the class's teacher while `audit_log.actor_label` records the admin who actually entered it (so "the office backfilled it" is visible).
- The inline signal on a row ("△ also absent Mon & Tue") is a read against the same student's recent `attendance_marks` — surfaced, never auto-acted-on. The AI nudge is pattern detection only and is **not** a Claude call (no `ai_usage_ledger` row) — it's a local heuristic over the teacher's own history, so attendance stays free and instant.
- Save is optimistic: the UI confirms immediately and syncs in the background. A conflict check flags a student marked present in two simultaneous periods.
- **Downstream:** the daily roll-up feeds the Parent weekly digest (P1), the Admin A5 (Students/at-risk → `risk_flags`) dashboard, and the Admin A8 (Reports/regulator) hub. It is also a primary input to the T6 substitute sheet.

Data tables.

`attendance_marks` (existing) — G5B Maths, Period 2, marked by Ms Swart (names in the `marked_by_teacher_id` / `student` columns are display stand-ins for the uuid FK):

student (name)	marked_on	bell_period	status	reason	marked_by_teacher_id
Ahmed Al-Amri	2026-05-31	P2	present	—	Ms Swart
Fatima Al-Hinai	2026-05-31	P2	late	bus_late	Ms Swart
Khalil Al-Mahri	2026-05-31	P2	absent	family_informed	Ms Swart
Nasser Al-Rashdi	2026-05-31	P2	absent	medical	Ms Swart
Maya Al-Lawati	2026-05-31	P2	present	—	Ms Swart

End-of-day entry by an administrator (note the audit actor differs from `marked_by_teacher_id`):

student	marked_on	bell_period	status	marked_by_teacher_id	audit_log.actor_label
Salim Al-Lawati	2026-05-31	P5	absent	Ms Swart	Front office · A. Said

Deferred to P2/P3. None for T1 itself. (Transport-integration auto-suggest of "Bus late" is a nice-to-have but degrades gracefully to the manual reason chip in P1.)

Open questions.

- Reason-code list per school — confirm the school's own categories (sales to source).
- Does the school want attendance at **every** teaching period, or once-per-day homeroom plus exceptions? (Schema supports both; affects UX volume.)

2. T2 — Rubric scoring

What it is. Roughly **monthly** (possibly quarterly) the teacher scores each student on the **6 Manhaj axes** (`rubric_criteria`). To keep it fast, **AI suggests where each data-led axis should sit** — using the student's grades, attendance, homework completion and behaviour notes — and shows the **evidence it used**. The teacher confirms or nudges the number. The two pure-judgement axes are left blank for the teacher to fill from their own observation; AI never auto-scores those.

IMPORTANT (founder note to resolve before/while building): (a) **Estimate the AI cost.** A suggestion run is *per student* × *per axis* × *monthly*. Sizing input for the hybrid CTO: ~6 axes/student, of which ~4 are AI-suggested; a 600-student school × 4 axes × ~10 score-months ≈ **24,000 suggestion calls/year per school**. Each call bundles that student's recent grades/attendance/homework/behaviour into one Haiku-class prompt. Multiply tokens × the rate in `claude-api` to get a per-school figure, and log every call to `ai_usage_ledger` so the real number replaces the estimate within the first pilot month. (b) **Who does it.** Decide whether **all teachers** score the rubric or **only student-administrators / homeroom advisors** do (one consolidated score per student instead of per-subject-teacher). This changes both the volume above and the data shape (per-subject rows vs one cross-subject row — `rubric_scores.subject_id` is already nullable to allow the latter). **Decision:** keep T2 in **Phase 1 for now**, but explicitly flag it as a **candidate to push to Phase 2** if the cost finding from (a) or the ownership decision from (b) makes per-teacher monthly scoring unattractive.

← Previous

Save & next →

M Manhaj AI has proposed scores for the 4 data-led axes using Layla's May grades, attendance, homework, and behaviour notes. The 2 judgement axes are blank for you to fill in.

Conceptual understanding AI-PROPOSED

How well Layla grasps the underlying ideas behind what she's learning — for maths this term: fractions, equivalence, ordering.

1 EMERGING	2 DEVELOPING	3 PROFICIENT	4 STRONG	4.6 ADVANCED
---------------	-----------------	-----------------	-------------	-----------------

M EVIDENCE USED BY AI

- 92% on Tuesday's chapter quiz (top of class)
- Classwork: 5/5 fraction problems correct on Wed & Thu
- Last term overall in this axis was 4.2 — improving

Analytical thinking AI-PROPOSED

Breaks problems down, sees patterns, draws conclusions. For maths: multi-step problems, justifying answers.

1 EMERGING	2 DEVELOPING	3 PROFICIENT	4 STRONG	5 ADVANCED
---------------	-----------------	-----------------	-------------	---------------

M EVIDENCE USED BY AI

- 3 of 4 multi-step word problems showed correct working (week of 20 May)
- Volunteered alternative method on Wed
- Conf. interval narrower — propose 4.2 if you saw stronger justification

Communication of reasoning YOUR JUDGEMENT

Explains thinking clearly — verbally and in writing. Not auto-scoreable from data.

1 EMERGING	2 DEVELOPING	3 PROFICIENT	4 STRONG	5 ADVANCED
---------------	-----------------	-----------------	-------------	---------------

Nothing automatic for this axis. Your observation is the source of truth. Add a one-line note below to support the score.

YOUR NOTE (OPTIONAL, HELPS HER PARENTS AND NEXT TEACHER)

e.g. Confidently explained her fraction method to a peer on Wed.

Collaboration YOUR JUDGEMENT

Works productively with others, listens, contributes equitably.

1 EMERGING	2 DEVELOPING	3 PROFICIENT	4 STRONG	5 ADVANCED
---------------	-----------------	-----------------	-------------	---------------

M CONTEXT (NOT USED IN PROPOSING SCORE)

- Behaviour notes: +2 recognitions this month (incl. "helped new student at lunch Thu")

YOUR NOTE (OPTIONAL)

Helped a new classmate during lunch Thu — Ms. Sara also noted.

Self-direction AI-PROPOSED

Manages her own learning, completes homework, asks for help when stuck.

1 EMERGING	2 DEVELOPING	3 PROFICIENT	4 STRONG	5 ADVANCED
---------------	-----------------	-----------------	-------------	---------------

M EVIDENCE USED BY AI

- Homework completion this month: 89% (1 miss - Mon 25 May)
- Self-flagged "stuck on Q4" in homework portal — proactive
- Same axis last term: 4.0 — stable

Application AI-PROPOSED

Uses what she's learned in new contexts — real-world examples, cross-subject links.

1 EMERGING	2 DEVELOPING	3 PROFICIENT	4 STRONG	5 ADVANCED
---------------	-----------------	-----------------	-------------	---------------

M EVIDENCE USED BY AI

- Solar-system project link to fractions ("3/4 of moon visible") — cross-subject signal
- Real-world quiz section: 4/5 correct

OVERALL SCORE - THIS CYCLE

4.1 /5.0

Save draft

Confirm & next student

↑ +0.2 vs April - improving in conceptual + application

How the scoring works: AI proposes scores on the 4 data-led axes (using grades, homework, behaviour notes) and shows the evidence it used. You confirm or adjust. The 2 judgement axes are yours — AI never auto-scores them. All saved scores are versioned and audit-logged.

What this screen is

www.its-figh

REPLYING TO IT SUPPORTS

NEW FEATURES

NEW FEATURES

- Class roster sidebar with completion progress per student
- Per-student scoring panel with 6 axes
- AI-proposed axes (academic) vs teacher-judgement axes (behavioural) visually distinguished
- Per-axis 5-segment scale with descriptive labels (Emerging → Advanced)
- Evidence box per AI-proposed axis showing the data used
- Empty slots for judgement axes ("your observation is the source of truth")
- Inline teacher notes per axis (optional)
- Overall score auto-calculated with month-over-month delta
- Audit log of all scores

注：一、德文为引文时加引号，加书名号。

Data inputs, backend services, AI role, and privacy considerations.

Copyright © 2004 John Wiley & Sons, Ltd.

- Student's assessment scores (this cycle)
- Homework completion records
- Behaviour notes (positive + incidents)
- Last cycle's rubric scores (for delta + trend)
- Rubric framework definition (5 axes, scale labels) — Marjag IP per school customisation
- Subject-specific descriptors per axis

BLACK KING BUILT BY NEGROES

- `rubrics + rubric_criteria + rubric_scores` tables (defined in schema)
- AI scoring engine per axis: weighted aggregation of relevant signals → suggested score 1.0–6.0 with confidence interval
- Evidence trail (which data points fed each AI proposal)
- Teacher override layer (final score = teacher's confirmation/adjustment of AI proposal)
- Versioning (every score change tracked with who/when)
- Feeds student growth screens, parent monthly report, university tracker

and 1998). The authors of this paper have been involved in the development of the first two of these systems.

Heavy and structured: It proposes scores for 4 of 6 axes using objective data, shows evidence, acknowledges uncertainty. Fewer scores the 2 judgement axes (collaboration, communication).

INTERVIEW & ANALYSIS

Teacher sees two classes. Scores feed downstream views with appropriate reduction. Audit-logged.

3 - 7443 440-0000

EVIDENCE USED BY THIS AIs: Your observation is the source of truth. Add a one-line note below to support the score.

YOUR NOTE (OPTIONAL... HELPS HER PARENTS AND NEXT TEACHER):

e.g. Confidently explained her fraction method to a peer on Wed.

Collaboration (new assessment)

Works productively with others, listens, contributes equitably.

1

2

3

4

5

EVIDENCE JUST USED IN PREVIOUS SCORES:

- Behaviour notes: «**recognises this month**» (incl. "helped new student at Lunch Thu")

YOUR NOTE (OPTIONAL):

Who uses it & permissions. Teachers for their own sections (P1 default), **or** restricted to student-administrators/advisors pending decision (b). Scores are versioned and audit-logged.

Workflow.

Backend & data linkage.

- The 6 axis cards map to `rubric_criteria` rows (`axis_code` , `axis_name_en` , scale 1–5). Each saved card is one `rubric_scores` row, keyed unique (`student_id` , `subject_id` , `rubric_id` , `axis_code` , `scored_for_month`) with `scored_for_month` normalised to `YYYY-MM-01` — so re-running a month is an upsert.

- **AI suggestion** = one Claude call per student that gathers `assessment_results` (this month's grades), `attendance_marks`, homework completion (`homework-kind assessments`), and `behaviour_notes`, returns a proposed score + evidence bullets per data-led axis, and writes one `ai_usage_ledger` row (`request_kind='rubric_suggest'`). The "evidence used by AI" list on screen is that call's returned justification — it is **not** stored as truth; only the teacher-confirmed `score` (and optional `notes`) persists.
- The two judgement axes are saved exactly like the others but were never AI-proposed; their teacher note goes into `rubric_scores.notes`.
- **Downstream:** scores feed report cards (a **Phase-2** artifact — the Admin `report_archive`), the parent digest, and are a natural source for student goals (§5).

Data tables.

`rubric_criteria` (existing · the Manhaj 6 axes, scale 1–5):

axis_code	axis_name_en	AI-suggested?
analytical	Analytical thinking	yes (data-led)
creative	Conceptual / application	yes (data-led)
oral	Communication of reasoning	no (judgement)
written	Written expression	yes (data-led)
participation	Collaboration	no (judgement)
homework	Self-direction	yes (data-led)

`rubric_scores` (existing) — Sara Al-Mughairi, G5B Maths, May 2026 (names in the `student` / `scored_by_teacher_id` columns are display stand-ins for the uuid FK):

student	subject	axis_code	score	scored_for_month	scored_by_teacher_id	source
Sara Al-Mughairi	Maths	analytical	4.0	2026-05-01	Ms Swart	AI-proposed, confirmed
Sara Al-Mughairi	Maths	creative	4.5	2026-05-01	Ms Swart	AI-proposed, adjusted ↑
Sara Al-Mughairi	Maths	oral	4.0	2026-05-01	Ms Swart	judgement
Sara Al-Mughairi	Maths	participation	4.0	2026-05-01	Ms Swart	judgement + note
Sara Al-Mughairi	Maths	homework	4.0	2026-05-01	Ms Swart	AI-proposed, confirmed

`ai_usage_ledger` (existing) — one row per student suggestion run:

request_kind	model	input_tokens	output_tokens	cost_usd	is_background
rubric_suggest	claude-haiku-4-5	1,850	420	0.0021	true

Deferred to P2/P3. Potentially the whole screen (see founder note) — if deferred, the clean-linkage consideration is that `rubric_scores` already exists, so a P2 build only needs to add the AI-suggestion call + ledger logging; the manual scoring path could ship in P1 either way.

Open questions.

- (a) Confirmed AI cost per school once pilot ledger data lands.
- (b) All teachers vs student-administrators only — drives volume and per-subject vs cross-subject rows.
- Monthly vs quarterly cadence — set per school.

3. T3 — Class summary / lesson plan

What it is. The teacher's lightweight weekly hub for a class. Two easy inputs:

1. **Weekly pre-lesson plan** — once a week, the teacher types what *next* week's class will cover. The platform pre-seeds the structure from the class's known curriculum split (e.g. "Math G5" has a defined chapter sequence in `section_subjects`), so the teacher mostly confirms/edits a topic line rather than starting blank.
2. **Optional post-lesson summary** — at any time, a quick note of what was *actually* covered.

It also offers an **"Add follow-up"** pop-up: a convenient capture for a to-do tied to the class (e.g. "catch up Khalil on Tuesday's quiz", "note for Mr Khalid in G6 — equivalence refresher"). No parent preview is needed for follow-ups; they're internal and will later be summarised across multiple classes.

WEEKLY CLASS SUMMARY

G5B Maths - Week of 24 — 28 May

← Last week

This week

Your class hub - this week

What just happened, what you flagged to follow up, what's coming next. Parent summary at the bottom.

THIS WEEK AT A GLANCE

Topic: started Chapter 4 fractions - equivalence focus

From your lesson plan - 24 May

Tuesday quiz - class avg 78% - top score 92% (Layla)

From assessments - 26 May

Attendance 96% - 1 absent on Mon (Khalil), 1 late Wed (Fatima - bus)

From your roll call

4 positive recognitions logged - 0 incidents

From behaviour notes

Homework completion 87% - 3 misses

From homework portal

FOLLOW-UPS FROM THIS WEEK

Catch up with Khalil Al-Mahri on Tuesday's quiz

Missed Monday - also flagged on retention dashboard - quick 1:1 before Sun's class

PRIORITY

Reinforce equivalence concept

3 students lost marks on Q4 of Tuesday's quiz - cover again early Sunday

CONCEPT

Update lesson plan with fraction-strips activity

Saved as Wed reusable resource - also shared with Ms. Khadija (G6)

DONE

Mention Layla's quiz top score in next parent-teacher conference

Auto-added to her PTC notes

PTC NOTE

Add a note for Mr. Khalid (G6 Maths)

Students moving up next year will need a equivalence refresher in week 1

HANDOFF

+ Add follow-up

NEXT CLASS

SUN 31 MAY

9:00 AM - Period 2

Room 12 - 22 students

PLANNED TOPIC

Equivalent fractions - intro

From your lesson plan - linked

PRE-CLASS CHECKLIST

Print fraction strips for 22 students

Set up smartboard with equivalence visualiser

Confirm Khalil is in class (parent confirmed-Tue)

Have catch-up sheet ready for Khalil (1 page)

G5B MATHS - WEEK OF 24 — 28 MAY

A strong week on fractions — and a real-time breakthrough

From Mr. Tariq - Class teacher - G5B

This week we opened **Chapter 4 (fractions)**, focusing on the idea of equivalence — what it means for two different-looking fractions to mean the same amount.

Tuesday's quiz showed the class is in a good place to build on: a **class average of 78%**, with a top mark of 92%. The strongest indication of how it's landing, though, came on Wednesday — we used hands-on fraction strips and the group discussion that followed was the best we've had this term. Several students explained their reasoning to each other with real confidence.

Attendance was 96%, and I'd like to recognise four pupils for positive contributions this week — they've been quietly making the classroom a better place to learn.

9. **RESEARCH, DEVELOPMENT**

Teacher's weekly class hub with this week's data, follow-ups, next-class plan, AND an AI-drafted parent summary as the final output. Class management first, parent comms is the byproduct.

www.elsevier.com/locate/jmb

Class teachers writing weekly summaries, planning ahead.

CONCLUSIONS

Replaces "start from a blank page on Thursday" with a structured workflow that captures follow-ups as the week happens, plans next class explicitly, and outputs the parent summary on the back of it all.

KEY FEATURES

- This-week data (auto-pulled from attendance, assessments, behavior)
- Follow-ups list with category tags (Priority / Concept / PTC note / readoff)
- Next-class plan with date, topic, pre-class checklist
- "Plan next week" forward navigation
- (Divide then parent summary composer (bullet + row))
- Right column: readiness gate (date complete) observations added? week ended?
- Live preview as parents will see it (matches the digest design)
- Distribution panel (weekly digest / class page / standalone email) / translate to Arabic

图 1 中国城市人口密度分布图

Data inputs, backend services, AI role, and privacy considerations.

INPUT DATA REQUIRED

- All inputs from T1 (attendance), T2 (rubric), and other teacher entries
- Lesson plan for this and next class
- Behaviour notes logged during the week
- Recognition entries logged
- Teacher's qualitative bullets
- School-default tone setting

總編輯：陳其南 總發行：陳其南 總經理：陳其南

- Class hub view aggregating per-class signals
- Follow-up items table with carry-forward to next week
- Cross-reference to PTE notes table (auto-add when PTE note tag used)
- Cross-teacher handoff queue (when Handoff tag used)
- Readiness gate state machine (all conditions met = preview unlocked)
- Parent summary delivery integration (leads P1 weekly digest or sends standalone)
- Tone-matched i/sharing via Claude with school-wide cache

2000-2001

Heavy: AI drafts the parent summary from data + teacher bullets in school's tone. Also runs the AI quality check in the readiness gate

PRIVACY & ACCESS

Teacher sees own classes. Parent summaries go to the United Families only.

G5B MATHS - WEEK OF 24 - 28 MAY

A strong week on fractions — and a real-time breakthrough

From Ms. Yehya Class Teacher: G5B

This week we opened Chapter 4 (fractions), focusing on the idea of equivalence — what it means for two different-looking fractions to mean the same amount.

Tuesday's quiz showed the class is in a good place to build on a **class average** of 72%, with a top mark of 92%. The strongest indication of how it's landing, though, came on Wednesday — we used hands-on fraction strips and the group discussion that followed was the best we've had this year. Several students explained their reasoning to each other with real confidence.

Attendance was 98%, and I'd like to recognise four pupils for positive contributions this week — they've been quietly making the classroom a better place to learn.

98%	72%	87%	4
ATTENDANCE	QUIZ AVG	HOMWORK	REGISTRATION

ENDING UP NEXT WEEK

We move into equivalent fractions and link the idea back to division. Please ask your child about the fraction-strip activity — they enjoyed it.

WHERE THIS GOES

The 5 PM
- Live now**
Visible to parents

Who uses it & permissions. Class teachers, own sections only. Follow-ups tagged `handoff` are visible to the named receiving teacher.

Workflow.

Backend & data linkage.

- Both the weekly plan and the post-summary write to `lessons` (existing: `topic`, `learning_objective`, `section_id`, `subject_id`, `teacher_id`, `held_on`, `timetable_slot_id`). To distinguish a forward-looking *plan* from a backward-looking *summary*, add: **NEW** `lessons.plan_kind` (`'weekly_plan'` | `'post_summary'`) and **NEW** `lessons.planned_for_week` (date, Monday-normalised, for the weekly plan). A weekly plan row links to the upcoming `timetable_slots`; a post-summary links to the slot that just ran.
- The pre-seed reads `section_subjects` (the curriculum volume/split for that sectionxsubject) plus the most recent `lessons` rows to propose the next topic — the teacher confirms or overwrites.
- "Add follow-up" writes to **NEW** `lesson_followups` (modelled on `behaviour_notes`): (`id`, `school_id`, `section_id`, `lesson_id?`, `teacher_id`, `body`, `tag`, `target_teacher_id?`, `student_id?`, `is_done`, `created_at`). The `handoff` tag routes

to a named teacher; the `PTC` tag attaches to the student's parent-teacher-conference notes; `priority / concept` stay on the teacher's own list.

- **Downstream:** the weekly plan and follow-ups are exactly what the **T6 substitute sheet** reads to fill each period's "Lesson plan" and "Students to know about" blocks.

Data tables.

`lessons` (existing + **NEW** columns) — G5B Maths:

held_on / planned_for_week	topic	learning_objective	plan_kind NEW	planned_for_week NEW
2026-05-26	Chapter 4 fractions · equivalence	Understand equivalent fractions	post_summary	—
2026-05-31 (plan)	Equivalent fractions · intro	Recognise & generate equivalents	weekly_plan	2026-05-25

NEW `lesson_followups` (names in the `target_teacher_id` / `student_id` columns are display stand-ins for the uuid FK):

body	tag	target_teacher_id	student_id	is_done
Catch up Khalil on Tuesday's quiz	priority	—	Khalil Al-Mahri	false
Reinforce equivalence concept (Q4 misses)	concept	—	—	false
Mention Maya's top quiz score at PTC	ptc	—	Maya Al-Lawati	false
Note for Mr Khalid (G6): equivalence refresher wk 1	handoff	Mr Khalid	—	false

Deferred to P2/P3 — the AI parent-summary draft. The mockup shows the right-hand "Preview · how parents will see it" parent summary composer. That **AI-drafted parent summary is deferred to Phase 2.**

- *Why (in workflow terms):* it's only needed ~**monthly or on request**, not per class — so it doesn't belong on the per-class, per-week critical path, and bundling it into P1 would add a Claude cost and a readiness-gate state machine for an output the school consumes far less often than the plan/summary inputs.
- *Clean-linkage to consider when built later:* it should read the **same** `lessons` (plan + summary) + `lesson_followups` + the week's `attendance_marks` / `assessment_results` / `behaviour_notes`, and write to **comm_drafts** (template-driven, consent-gated, sent via the Parent digest P1). Because the P1 inputs already land in those tables, the P2 draft is purely additive — no migration of T3's data is needed.

Open questions.

- Confirm `plan_kind` / `planned_for_week` vs a separate `lesson_plans` table (current recommendation: reuse `lessons` with the two **NEW** columns to keep the substitute-sheet join simple).
- Does `lesson_followups` need a due-date column in P1, or is `is_done` enough?

4. T6 — Substitute handoff sheet

What it is. When a teacher is approved as absent, the platform **auto-builds a day-of handoff sheet** for whoever covers their classes — per-period lesson plan, materials checklist, the students a sub must know about (allergy/medical, catch-up, EAL, behaviour), a Plan B per lesson, emergency contacts, and an end-of-day checklist. The substitute reads it on the web or as a printed 1-pager and taps "I've read this". Nothing here is freshly typed by the teacher — it's **derived from data already entered** (timetable, lesson plans, roster, attendance, notes).

Visual.

SUBSTITUTE HANDOFF

Mr. Tariq's classes - Sunday 31 May 2026

COVERING FOR: Mr. Tariq Al-Bahri - Maths YOU: Ms. Fatima Al-Hinal BUILDING: Main - Floor 2 - all rooms nearby REACH: Reception ext. 100

Welcome — you've got 4 teaching periods and 2 free. Mr. Tariq's lesson plans are below for each one. Three students need a quick read of their notes before you walk in. You're covering until 2:10 PM, please leave the classroom keys at reception.

This handoff was auto-drafted from Mr. Tariq's lesson plans + this week's class data, then reviewed by Mr. Tariq before sending. Anything unclear, call him on +968 9876 1234.

YOUR DAY AT A GLANCE

P1 G5B Maths 8:00 – 8:45	P2 Free 8:00 – 9:45	P3 G3A Maths 9:45 – 10:30	P4 G5B Maths 10:45 – 11:30	LUNCH Staff room 12:00 – 12:45	P5 G6C Maths 12:45 – 1:30
--------------------------------	---------------------------	---------------------------------	----------------------------------	--------------------------------------	---------------------------------

PERIOD 1 - 8:00 — FIRST CLASS OF THE DAY

Most important to read

P1 **G5B Maths - Room 12** **8:00 – 8:45**
22 students - Class teacher: Mr. Tariq 45 min

LESSON PLAN

Equivalent fractions — introduction. Open by showing the fraction-strip activity (strips are in the cabinet, left side, marked "G5 Frac"). Walk through 2 examples on the smartboard using the bookmark "Equivalent visualiser". Then students try the worksheet in pairs (printed, on Mr. Tariq's desk, 22 copies). Aim to finish 6 of the 10 problems together — homework is to complete the rest at home.

MATERIALS READY IN THE ROOM

- Fraction strips - cabinet left "G5 Frac" 22 sets
- Smartboard equivalence visualiser bookmarked on desktop browser
- Worksheet stack on Mr. Tariq's desk 22 copies
- Khalil Al-Mahri's catch-up sheet top of desk - he was absent Mon

STUDENTS TO KNOW ABOUT

- Layla Al-Habib** — severe peanut allergy. **Epipen kept with the school nurse, clinic ext. 225. No food incidents expected in this lesson, but be aware.**
- Khalil Al-Mahri** — absent Mon, missing the chapter-quiz prep. Hand him the catch-up sheet at the start of class and check in once during the worksheet.
- Fatima Al-Hinal** may arrive late (bus 8 has been delayed this week). Wave her in quietly, don't make a thing of it.

PLAN B (IF PRESSED FOR TIME)

If you don't get through 6 problems, that's okay — pages 87–88 of the textbook cover the same material as reading homework. The fraction-strip activity is the must-do, everything else can shift.

P2 **Free period** **9:00 – 9:45**
Use staff room - W01 password on desk 45 min

P3 **G3A Maths - Room 8** **9:45 – 10:30**
10 students - Routine review lesson 45 min

LESSON PLAN

Multiplication tables — weekly review. Run the flash-card warm-up (cards in Room 8 cabinet), then the times-table game on the smartboard (URL bookmarked). Last 10 minutes: the students do their weekly times-table check (sheet on the teacher's desk). Mr. Tariq usually rewards top scorers with stickers — the box is in the top drawer.

STUDENTS TO KNOW ABOUT

- Hassan Al-Said** — minor head bump last Thursday (logged in safeguarding). Watch for tiredness, ask once how he's feeling. Otherwise normal day.

P4 **G5B Maths - Room 12 (same class as P1)** **10:45 – 11:30**
22 students - same room, same group 45 min

LESSON PLAN

Equivalence practice. Continue the worksheet from Period 1. Aim to finish problems 7–10 together. The last 10 minutes: a brief one-question exit ticket (printed, on desk) — collect at the door.

SAME STUDENT NOTES AS PERIOD 1

Layla (allergy), Khalil (catch-up), Fatima (bus) — see Period 1 above. No additional notes for this period.

L **Lunch** **12:00 – 12:45**
Staff room - supervisors handle the cafeteria 45 min

P5 **G6C Maths - Room 14** **12:45 – 1:30**
24 students - Decimal fractions 45 min

LESSON PLAN

Decimal fractions — introduction. Open with a real-world example (money — most natural). Slides 1–6 of "G6 Decimals" deck (already loaded on smartboard). Stop after slide 6 and have students do examples 1–5 on the back wall whiteboards in groups of 3.

STUDENTS TO KNOW ABOUT

- Zhao Li (Daniel)** — joined 2 months ago, English-language learner. He understands maths well but may need extra time on instructions. Bilingual maths terms sheet is in his folder if he asks.

5. WRITING SUMMARY

What this screen is

Auto-drafted day-of-plan for a substitute teacher covering an absent teacher's classes – with per-period lesson plan, student notes, materials checklist, special students flagged, and a Plan B per lesson.

www.elsevier.com/locate/jmb

Substitute teachers walking cold into someone else's classes

IMPORTANCE OF SUBGROUPS

Closes the loop: when admin [AE] assigns a substitute, this sheet is auto-generated from the absent teacher's lesson plans + class data and sent to the sub via email + in-app.

NEW FEATURES

- Cover header: who's covering whom, building, day overview
- Day-at-a-glance strip (all periods visible at once)
- Per-period card: lesson plan, materials checklist, student callouts, Plan B
- Coloured callouts:  medical,  catch-up,  EAL,  behaviour
- Carries forward follow-ups from T3 (e.g. "Thank them for catch-up sheet")
- Emergency contacts card (reception, nurse, head of department, absent teacher)
- End of day checklist + 1-page print = acknowledgement button

© - Bundesarchiv, Berlin

What it takes to build this for real

Data inputs, backend services, AI role, and privacy considerations.

Copyright © 2004 John Wiley & Sons, Inc.

- Absent teacher's lesson plans for the day
- Class rosters with per-student special notes (allergies, behaviour, EAL, catch-up)
- Materials inventory (what's already in the classroom)
- Room assignments
- Recent class summary follow-ups (TTS) to surface relevant actions
- Emergency contact list

© 2007 The Authors
Journal compilation © 2007 Blackwell Publishing Ltd

- Triggered when sub is assigned in AR
- Aggregation: pulls lesson plans + class data + follow-ups + student calls
- Claude API for narrative phrasing ("Open with the fraction-stick activity...")
- PDF generation for print mode
- Email delivery via Resend
- Acknowledgement state tracking (was sheet read? when?)
- Reviewed by absent teacher before send (if time allowed)

WHOLE

Heavy: AI drafts the narrative lesson plan text from the absent teacher's former lesson plan notes. Pulls together cross-referenced student notes. Generates Plan B if not specified.

CONTACT & ADDRESS

Sub sees only the absent teacher's day. No broader access. Acknowledged-as-read tracked

Who uses it & permissions. The assigned substitute (sees only the absent teacher's day, nothing broader). Optionally reviewed by the absent teacher before send if time allows. Read-acknowledgement is tracked.

Workflow — trigger → gather → generate PDF → deliver.

Syntax error in text

mermaid version 11.15.0

Backend & data linkage.

- **Trigger:** an approved `staff_absences` row (Admin A4 — Faculty/HR sick-leave queue) with a `sub_teacher_id` assigned fires the handoff build — no teacher action required. (If the school assigns the sub later, re-approval/assignment re-fires and bumps the sheet version, as the mockup's "v2 · edits visible" footer shows.)
- **Gather:** the day's `timetable_slots` for the absent teacher → for each slot, the matching `lessons` weekly-plan row (T3) for the lesson body, `rooms` for location, `student_enrollments` for the roster, `attendance_marks` (who's been absent → catch-up callout), `behaviour_notes` / `risk_flags` and the school's safeguarding/medical flags (allergy, EAL) for the "students to know about" callouts, and `lesson_followups` tagged for that class (e.g. "hand Khalil his catch-up sheet").
- **Generate:** Claude turns the absent teacher's terse plan notes into sub-readable prose and a Plan B per period; one `ai_usage_ledger` row (`request_kind='substitute_sheet'`). The HTML is rendered to a **PDF** for the print 1-pager.
- **Deliver:** emailed via **Resend** plus an in-app link. Acknowledgement (`ack_at`) and "Day done" are tracked; "Day done" notifies the absent teacher. Every step writes `audit_log` .
- The handoff artifact itself can be a **NEW** `substitute_sheets` row (`staff_absence_id` , `for_date` , `sub_teacher_id` , `pdf_path` , `version` , `ack_at`) so re-generation and read-tracking are first-class — confirm in the implementation plan.

Data tables.

Trigger row — `staff_absences` (NEW, from admin handover · names in the `teacher_id` / `sub_teacher_id` columns are display stand-ins for the uuid FK):

teacher_id	start_date	end_date	reason	status	sub_teacher_id (assigned)
Mr Tariq Al-Bahri	2026-05-31	2026-05-31	sick	approved	Ms Fatima Al-Hinai

Gathered day (read-only join across existing tables) — Mr Tariq, Sun 31 May:

period	section	room	lesson topic (from <code>lessons</code>)	callouts (from notes/flags)
P1	G5B Maths	R12	Equivalent fractions · intro	Sara (allergy), Khalil (catch-up), Fatima (bus)
P3	G3A Maths	R8	Multiplication tables · review	Hassan (head bump · safeguarding)
P5	G6C Maths	R14	Decimal fractions · intro	Zhao Li (EAL)

NEW `substitute_sheets` (proposed):

staff_absence_id	for_date	sub_teacher_id	pdf_path	version	ack_at
(Mr Tariq · 31 May)	2026-05-31	Ms Fatima Al-Hinai	storage://subs/.../v2.pdf	2	2026-05-31 07:55

Deferred to P2/P3. None — T6 is Phase 1. (The richer "sub-debrief form" that captures the sub's end-of-day notes can be a light P1 add or a small P2 follow-on; it writes back into `behaviour_notes` / `lesson_followups` .)

Open questions.

- Confirm `substitute_sheets` as a dedicated table vs storing the PDF path on `staff_absences` .

- Medical/allergy callouts: the canonical **NEW student_health** table is the system-of-record for allergies/medical (not a "safeguarding log" or separate "allergy register"). Sales to source the school's existing format to populate it.
- Does the absent teacher's pre-send review block delivery, or send-then-allow-edit (mockup implies the latter with versioning)?

5. Teacher-set student goals (cross-link to Student §S1)

Teachers need a place to **input a student goal** (e.g. "Layla — lead a peer maths discussion this term"). Goals can be set by **either a teacher or the student**, so this is the teacher-side input surface for the same data the Student doc documents on the student side.

- **Surface:** a "Set a goal" action reachable from the student's profile / from T2 rubric or T3 class views, scoped to students in the teacher's sections (`teacher_section_subject` → `student_enrollments`).
- **Table:** **NEW student_goals** (`id`, `student_id`, `title`, `metric`, `target_value`, `created_by_role` (`'student'` | `'teacher'`), `created_by_id`, `status` (`'on_track'` | `'at_risk'` | `'met'` | `'missed'`), `due_on`, `created_at`). Progress is **computed on read** (from `rubric_scores` / `attendance_marks` / `assessment_results`), not stored.
- **Create-goal workflow = same shape as the student-side §S1.** *Change:* the **actor is a teacher**, who can set a goal for **any student in their sections** (the student-side version is the student setting it for themselves). A teacher-created goal sets `created_by_role='teacher'` (with `created_by_id` = the teacher); otherwise the fields and statuses are identical. Do not redraw the workflow — see Student doc §S1.

Z. Build & data handover

Task allocation

Build item	Owner role	Why
<code>attendance_marks</code> write-path + optimistic UI + end-of-day/admin entry mode	Engineer	Core CRUD + sync + upsert keying; highest-volume table.
Conflict detection (student in two periods) + downstream rollups (digest/retention/regulator)	Engineer	Cross-table reads + scheduled aggregation.
Rubric AI-suggestion call + <code>ai_usage_ledger</code> logging	Engineer	Claude integration, prompt assembly, evidence return.
Rubric AI cost estimate + all-teachers-vs-admins decision	Hybrid CTO	Cost analysis drives the P1-vs-P2 call on T2 (founder note §2).
<code>lessons</code> NEW columns + <code>lesson_followups</code> table + pre-seed from <code>section_subjects</code>	Engineer	Schema add + curriculum-split read.
T6 trigger (off approved <code>staff_absences</code>) + gather/Claude/PDF/Resend pipeline + <code>substitute_sheets</code>	Engineer	Multi-table aggregation, PDF render, email, ack tracking.
<code>student_goals</code> table + teacher-side create surface (shared with §S1)	Engineer	Small table; coordinate field shape with Student build.
Validate attendance cadence, reason codes, rubric cadence/ownership with the school	Sales (non-technical)	Direct school access; confirms real-world workflow + lists.
Source allergy/medical + EAL system-of-record for T6 callouts	Sales (non-technical)	School holds these today; needed before T6 callouts are trustworthy.

Data to source from the school

Table / dataset	Fields needed	Source (who/where at school)	Why it's needed / what it feeds
Attendance reason codes	the school's own categories (bus/medical/family/...)	Front office / attendance lead	T1 reason chips reflect real categories.
Attendance cadence	per-period vs once-daily homeroom	Academic deputy	Sizes T1 volume + which bell_periods get marks.
Curriculum split per class	chapter/topic sequence per section×subject	Heads of department	Pre-seeds T3 weekly plan (section_subjects / lessons).
Rubric cadence & ownership	monthly vs quarterly; all teachers vs advisors	Principal	Drives T2 scope, volume, AI cost (founder note §2).
student_health (NEW · system-of-record for allergies/medical)	allergy, medical alerts, EAL status per student	School nurse / safeguarding lead	T6 "students to know about" callouts must be accurate.
Emergency contacts	reception, nurse, HoD extensions; teacher mobile	Office manager	T6 emergency-contacts card.
Substitute assignment process	how/when a sub is named after sick-leave approval	HR / admin	Confirms the T6 trigger point off staff_absences .

End of Teacher Phase-1 handover. NEW data objects introduced here: lessons.plan_kind , lessons.planned_for_week , lesson_followups , substitute_sheets , student_goals . Deferred: AI parent-summary draft (P2), T4 quiz builder (P2), T5 parent-message drafts (P3).
